Adjustment Settings for Operators

How to Use the [Adjustment Settings for Operators] Screen

This section explains how to use the Adjustment Settings for Operators.

- 
Press this key to collapse the hierarchical display of the adjustment items, and display only the group names of those items.
- [Reset]
Press this key to reset the settings/modifications being currently configured. The settings/modifications cannot be reset after you press [Apply].
- [Apply]
Press this key to apply the settings/modifications.
- Adjustment items
Adjustment items are displayed in this area. When you select an item, its configuration screen will then open.
- Configuration screen
Configure or modify the settings of the adjustment item that you have selected.

Note

- All items in Adjustment Settings for Operators appear regardless of which of the machine's optional components are installed. If you change the settings of options that are not installed, the changes will have no effect.

Adjustment Settings for Operators

Opening Adjustment Settings for Operators

1. Press [Adjustment Settings for Operators] on the Home screen.
2. Select and change adjustment settings.
The method for changing the selected adjustment setting depends on the setting that you want to change. For details, see page 176 "Features of the Displayed Items and Setting Operations".
3. Press [Apply].
4. Press [Home] () at the bottom of the screen in the center.

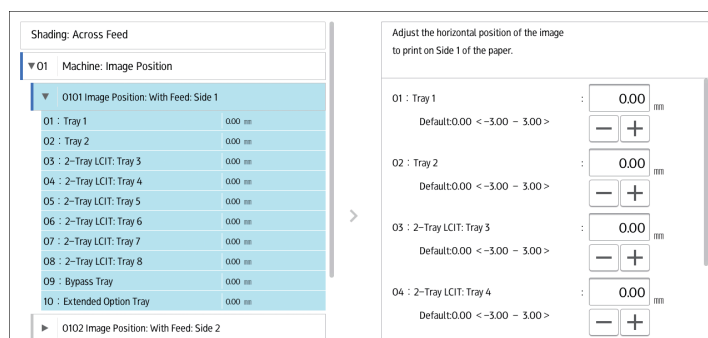

Features of the Displayed Items and Setting Operations

The following operations are available for each adjustment item:

- Value setting
- Item setting
- Executing
- Display only

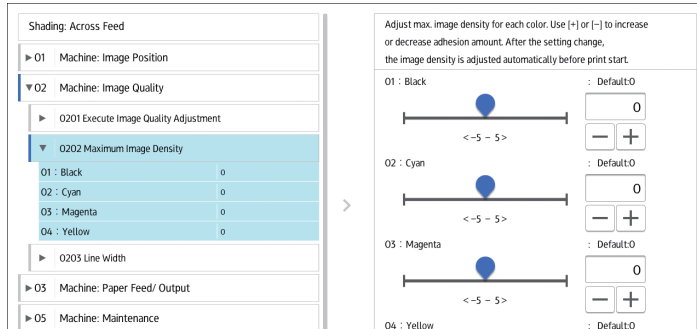

Value setting

Press [+] to increase the value, or [-] to decrease or use the numeric keypad to enter the value.

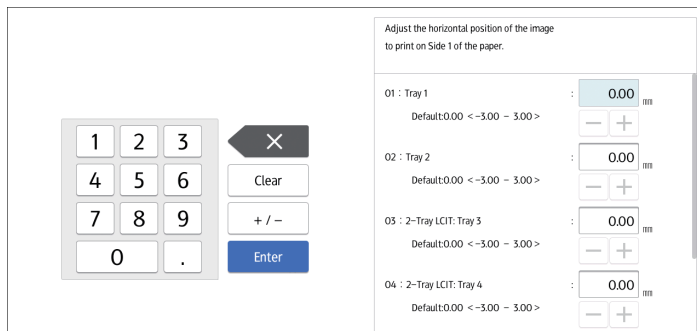

Adjustment Settings for Operators

For some settings, move the slider right or left to increase or decrease the setting value.

A numeric keypad appears to the left when you press the input box. Use the keypad to enter a value.

- [X]: Press to delete the entered value character by character.
- [Clear]: Clear the entered value.
- [+/-]: Change the sign of the entered value from + (positive) to - (negative) and vice versa.
- [Enter]: Confirm the entered value.

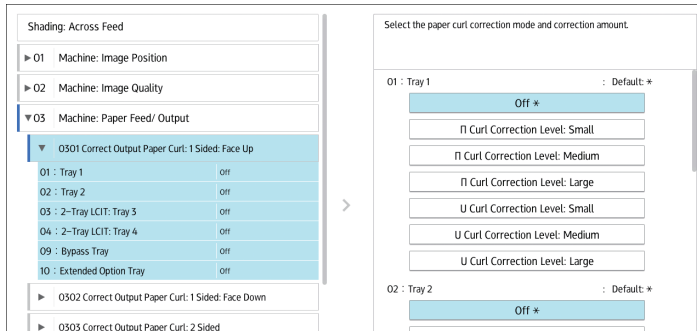

For some items, you can select a value from the pull-down list that appears when you press the input box. Select a value from the list.

Machine: Image Quality

0201 Execute Image Quality Adjustment

Execute image control or color registration adjustment manually.

The machine adjusts the image density. The time required for each process is as follows: about 5 minutes for [Adjust All], about 1.5 minutes for [Adjust Image Density], about 1 minute for [Density Difference: Acr Fd], about 2.5 minutes for [Density Difference: With Fd], and about 40 seconds for [Color Registration]. A message appears on the control panel while the process is in progress. Do not pull out the mainframe front covers while the message is being displayed.

Setting Items	Values
Adjust All	Press [Execute].
Adjust Image Density	
Density Difference: Acr Fd	
Density Difference: With Fd	
Color Registration	

Note

- The machine executes automatic image quality adjustment after a set interval or after printing a specified number of sheets. However, you can also manually initiate automatic image density adjustment whenever you want.

0202 Maximum Image Density

Adjust the toner adhesion amount to the intermediate transfer belt during the image density adjustment.

When the degree of coloration differs depending on the difference in the degree of pigmentation, adjust the toner adhesion amount.

Press [+] or [-] to increase or decrease the toner adhesion amount.

If you change the setting value, [Adjust Image Density] is automatically performed before the machine starts printing.

Setting Items	Default Value	Max. Value	Min. Value	Step	Unit
Black	0	5	-5	1	-
Cyan					
Magenta					
Yellow					

Note

- Increasing the toner adhesion might reduce fusibility, causing toner splatter or distorted text and thin lines.

Adjustment Settings for Operators

0203 Line Width

Adjust the intensity of the laser for rasterizing the image data. Press [+] or [-] to increase or decrease the intensity.

If you change the setting value, [Adjust Image Density] is automatically performed before the machine starts printing.

Setting Items	Default Value	Max. Value	Min. Value	Step	Unit
Black	0	5	-5	1	-
Cyan					
Magenta					
Yellow					

Note

- Screen dots and hairline width become thicker when you increase the intensity.

0304 Detect JAM099

Specify whether or not to detect double feed (multi-sheet feeding).

If this is set to [On], the machine can detect double feeding, which prevents blank sheets turning up in the delivered paper.

The machine may erroneously detect double feeding when using special paper (double-layer paper, such as label paper). If such erroneous detection occurs, set this to [Off].

This setting is invalid when you are printing from the tray for which custom paper is allocated. For such paper, the value specified in [Detect JAM099] in [Advanced Settings] takes precedence.

0613 Output Tray Descending Position

Specify the tray descent range according to the paper weight when sheets are ejected and delivered to the Shift Tray of Finisher SR5050 or Booklet Finisher SR5060.

The machine lowers the Paper Exit Guide each time it ejects stapled sheets. If the descent range is not appropriate for the paper weight, it may cause the paper to be improperly ejected or a diversion of sheets on the tray. Select the descent range appropriate for the paper you are using.

0614 Exit Guide Close Timing

Specify the timing to close the Paper Exit Guide when sheets are ejected and delivered to the Shift Tray of Finisher SR5050 or Booklet Finisher SR5060.

The machine opens and closes the Paper Exit Guide each time it ejects stapled sheets. If the Paper Exit Guide does not open and close at a proper timing, bending may occur with the stapled stack when stapled sheets fail to be properly ejected. Select the timing appropriate for the paper you are using.

0615 Output Trail Edge Press Setting

Specify whether or not to hold the trailing edge of sheets when they are ejected and delivered to the Shift Tray of Finisher SR5050 or Booklet Finisher SR5060.

If too many sheets are delivered to the Shift Tray, the Ejected sheets may not be correctly aligned due to the paper type and paper condition.

Setting it to [On] reduces the diversion of sheets.

0621 Set Number of Folds for Booklet

Specify the number of booklet folds to be performed when using Booklet Finisher SR5060. You can adjust the paper folding strength by changing the number of folds per the booklet.

When you select "0", the default value, the finisher folds the booklet according to the number of sheets in the booklet, as shown below.

- 1–13 sheets: 1 time
- 14–15 sheets: 2 times
- 16–25 sheets: 3 times

The value set here is added to the default values, which are 1, 2, and 3. Set a negative value to reduce the number of times the finisher folds booklets. Set -1, -2, or -3 to not fold booklets that have 1 to 13 sheets, 14 to 15 sheets, or 16 to 25 sheets, respectively.

0907 Maximum Stack Quantity in Stacker Tray

Specify the maximum number of sheets that can be stacked on the stacker tray. The setting applies to both the 1st and 2nd stackers.

The maximum number of sheets you can set differs depending on the size, thickness, and paper curl. Set the maximum number by specifying a ratio based on the number of sheets. Select [Large Size] when using paper whose vertical and horizontal lengths are 210 mm or longer whose area is 8¹/₂ × 11 or wider. Select [Small Size] when using other size paper.
